Dear Hiring Manager,

Data tells stories — and I love uncovering them. As a Data Science student at **Kean University**, I've spent the past few years learning how to turn raw numbers into clear, actionable insights that drive real results. Whether it's cleaning messy data, visualizing trends in Tableau, or coding in Python and R, I enjoy the challenge of finding structure and meaning where others might see noise.

In my current role at **Webbertech Technologies**, I've had the chance to bridge data and technology — from configuring Kubernetes and NGINX to improving processes through data-driven analysis. It's been exciting to see how small optimizations and smart automation can have a big impact. I'm also part of a **multi-university software development group**, where collaboration and creativity are at the core of what we build.

What motivates me most is solving problems and constantly learning — two things that the data world never runs out of. I take pride in being someone who asks "why," experiments until I find the answer, and helps teams make decisions backed by evidence.

I'd love the chance to bring that curiosity and analytical mindset to your team. Thank you for taking the time to review my application — I'd be happy to talk more about how I can contribute to your data projects and help uncover insights that matter.

Sincerely,

Damian Rusek
